DETAILED ACTION

Claim Rejections – 35 USC 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 2-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- a. In claims 2-4, “substantially” is a relative term and therefore indefinite.

Claim Rejections – 35 USC § 103(a)

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being obvious over Ito et al (U.S. 5,881,032).
5. Ito teaches a string of pits and lands formed in a transparent substrate, which is coated to form each recording layer where a transparent resin is injected between the first and second recording layers (column 2, lines 24-27). Coating is analogous to laminating. Ito discloses an information storage medium comprising plural recording layers wherein the spiral reproduction directions are opposite on different layers assigned to sectors at the same radial positions on

different layers having a complementary relationship (column 4, lines 41-46). Ito discloses an information storage media in which the data recording grooves are formed on the first and second recording layers (column 9, lines 56-65). Ito does not disclose the thickness of recording layers and their components. Thickness is a matter of optimization. It would have been obvious to one of ordinary skill in the art to optimize the thickness since discovering optimum or workable ranges involves only routine skill in the art. Ito does not disclose elevated or retracted grooves, however it would have been obvious to one of ordinary skill in the art to have the grooves of one recording layer elevated and the other retracted since these are conventionally known features within the art.
